DETAILED ACTION

1. Election/Restriction

A. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to isolated nucleic acid molecule and host cell, classified in class 435, subclass 69.1.
- II. Claims 15-19, drawn to an isolated polypeptide, classified in class 530, subclass 350.
- III. Claims 20-27, drawn to a method of screening for agonists, classified in class 435, subclass 7.2.
- IV. Claims 28-31, drawn to a method of screening for antagonists, classified in class 435, subclass 7.2.
- V. Claims 32, drawn to isolated nucleic acid molecule of SEQ ID NO:22, classified in class 435, subclass 69.1.

B. The inventions are distinct, each from each other because of the following reasons:

Inventions I, II and V are independent and distinct, each from each other, because they are products which possess characteristic differences in structure and function and each has an independent utility that is distinct for each invention which cannot be exchanged. The nucleic acid of Group II can be used to make a hybridization probe, or can be used in gene therapy as well as to produce the protein of interest.

Inventions I, V are unrelated to II, IV. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together.

Inventions II and III, IV are related as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product, or (2) the product as claimed can be used in a materially different process of using that product MPEP § 806.05(h).

Inventions III and IV are independent and distinct, each from the other, because the methods are practiced with materially different process steps for materially different purposes and each method requires a non-coextensive search because of different starting materials, process steps and goals.

Art Unit: 1647

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter as defined by MPEP § 808.02, the Examiner has *prima facie* shown a serious burden of search (see MPEP § 803). Therefore, an initial requirement of restriction for examination purposes as indicated is proper.

Furthermore, in order to be fully responsive, if Applicants elect Groups I-IV, Applicants must also elect one protein (SEQ ID NO:2, 5, 7, 9 or 11) and, depending on the elected Group, the nucleic acid molecules corresponding to that protein (SEQ ID NO:1, 3, 4, 6, 8 or 10).

C. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR § 1.48(b) and by the fee required under 37 CFR § 1.17 (h).
